Participants: Ismael Ziyani, Chandra Shekhar Mondal

Company Name: DanPanel Aps

Title: Booking system

Problem Statement

Our product will be a booking system developed for DanPanel ApS. The idea comes from a demand for a new system that is more user-friendly for customers and service companies fx. barbershops. The booking system must be equipped with a database and an interface for both companies and customers that can book services available. The companies will be able to set the timeframe for their services. And then the costumer will be able to choose the available times and optionally the employee to perform. The project will primarily rely on a hairdresser to apply a specific industry.

In terms of tools, we have chosen to work with PHP and Laravel framework for the interface. For the database we have gone for MySql.
